

State of the art—patent ductus arteriosus

Later this fall, for the second time in the 11-year history of CHD, we will feature a special issue, this time on the patent ductus arteriosus (PDA). Edited by Athar Qureshi, MD, from Texas Children's Hospital and Shyam Sathanandam, MD, from LeBonheur Children's Hospital, this will be a state-of-the-art review on the ductus. All aspects of the PDA will be examined from fetal physiology, anatomy, clinical

presentation, and medical and surgical treatment. This will be the repository containing all information from esteemed authors from around the world.

This special issue we hope will serve as a reference regarding any information about the PDA. This special edition will be informative, educational as well as exciting and all inclusive.
